From sign-up to your first morning standup, in nine steps.

PRE-CLASS SETUP	COMPUTER	AI SUBSCRIPTION	MOBILE COMPANION
~25 minutes total	Mac (macOS 13+) or Windows 11	Claude, ChatGPT, or Google AI	iPhone or Android browser

Nine steps, no Terminal

1. Sign up and tell us about your business

~12 mins · Any device

1 Reserve your Jumpstart seat

Pay by PayNow or card. Your receipt arrives by email at the address you signed up with.

2 Answer the questions about your business

About ten minutes of plain questions: what you sell, who buys, what eats your week. Your answers decide which departments you get.

3 Get your setup email

Your MusTech OS is built from your answers, and the setup link arrives in the email we send to the address you signed up with.

Have ready: Your email address, PayNow or card, and a rough picture of what you sell and who buys.

2. Install and connect

~15 mins · Your Mac or PC

4 Run the installer

Download it for Mac or Windows from your setup page, double-click it, and press Install. No Terminal, nothing else to install.

5 Open your dashboard

Press Set up my workspace on the setup page. Your dashboard opens in your browser; bookmark it. It runs on your own computer.

6 Connect your AI and your phone

On the Get started card, pick the AI tool you already pay for, then scan the code with your phone so you can send notes from anywhere.

Have ready: Your laptop, its login password, and the AI plan you pay for.

3. Set it up with us, then run it

2 days in person, then daily

7 Day 1: your brand and your ledger

Your brand colours, what you owe, what is owed to you, and your filing dates, all in one ledger. Nothing is guessed: a missing date is asked for.

8 Day 2: your first real jobs

With your AI: a quote, a payment chaser, your product listings, or your website, from your own records, for you to approve.

9 Every morning: your standup

By email and on your dashboard, in your brand colours: what is Red, what needs your call, and what is done. Answer in one line.

Have ready: Your laptop and charger, your price list, unpaid invoices, and the dates you must not miss.

A normal day

Morning	**Read your standup.** Red first, then what to decide. Answer on your dashboard or in one line.
At your desk	**Work with your AI.** Quotes, replies, listings, receipts, or your website, drafted for you to approve.
On the move	**Send notes from your phone.** A promise, an order, or a receipt photo; you get a numbered read-back to confirm.

If something goes wrong

"Set up" button did nothing: Run the downloaded installer first, then click Set up my workspace again.

Setup link expired: Press Send a new link on the setup page.

Closed the dashboard tab: Open your bookmark again; MusTech OS keeps running in the background.

Uninstalling or moving laptops: Open MusTech OS in Applications; your local company folder stays intact.
