Build, launch, and run with AI departments.

Stop using AI like a chat assistant. MusTech OS turns your laptop into a full operating company: you work with specialist AI departments to build websites, run social listening on market trends, launch products end-to-end, and project-manage daily and weekly execution.

Four Founder + AI Co-Execution Playbooks

Need a website? Work with your AI to create it.

BRAND HOUSE & PRODUCT BUILD

You set the positioning and visual direction with your AI. It writes the copy, codes the responsive pages, checks contrast and mobile layout, and prepares the live deployment.

→ **Production website built with you on localhost**

Need to research trends? Define the scope and let it run social listening.

MARKET INTELLIGENCE & STRATEGY

Work with your AI to define the exact research scope, buyer questions, and competitor watchlist. Your AI conducts social listening and distils real market signals into an actionable brief.

→ **Scoped social listening & competitor intelligence brief**

Need to launch a product? Strategy, compliance, testing, and daily project management.

GO-TO-MARKET, LEGAL & DELIVERY

Your AI works across departments to propose your social strategy, run regulatory and privacy policy checks, execute final go-to-market testing, and project-manage what needs doing every day and week.

→ **End-to-end launch: social strategy, privacy checks, testing & daily PM**

Run active projects, retainers, and cash flow without dropping a ball.

FOUNDER'S OFFICE & FINANCE

Every active project, retainer renewal, scope variation, and invoice lives in one Commitments Ledger. Your AI tracks weekly progress and brings only the calls that need your judgement to your 8 am briefing.

→ **Daily and weekly execution across projects, scope, and cash**

8 am · Company-Branded Executive Briefing

Delivered in your own company's brand palette so you start every morning with clear priorities:

DECIDE	Approve variation notice for Halcyon motion reel (+S$4,800, +6 days)?
DECIDE	Approve launch social calendar & PDPA privacy policy for 1 Dec?
INPUT	Confirm Q1 retainer rate for Arden Studio before renewal draft?
DONE	Website sprint 2 built & verified on localhost; 4 PayNow receipts reconciled.

Why Founders Run Real Operations on MusTech OS

01 **Full-Stack Execution, Not Chat Advice.** Your AI does not hand you generic tips. It writes production code, conducts scoped social listening, checks regulatory and privacy rules, and manages your launch calendar alongside you.

02 **You Hold the Pen on Money, Clients & Legal.** Departments research, build, test, and draft autonomously, while every client message, price change, public deployment, or payment waits for your one-line sign-off.

03 **Branded to Your Company, Owned by You.** Your 8 am Executive Briefing, read-backs, and alerts carry your own company name and brand colours. Everything runs locally on your computer with zero monthly SaaS rent to MusTech.

82	S$0/mo	100%	2 days
department playbooks across product, GTM, legal & finance	ongoing platform rent to MusTech; runs on your existing AI plan	of your client, financial & strategy files stay on your machine	hands-on calibration and live sprint execution at Jumpstart

Works with the AI subscription you already use (Claude Code, Codex, or Antigravity). **Installed and calibrated with you** at AI Jumpstart across two hands-on half-day sessions.
